

Road Network

AND offers proprietary digital maps: AND has more than 30 year of experience in digital map making and has digitalized over 34 million kilometers of roads with a broad range of attributes, approximately 1 million polygons and many millions of POI's. The proprietary database of AND contains a worldwide database of Digital Maps on various levels, from a scale of 1:250,000 to 1:2,000,000. North America and all Western European countries are available on turn-by-turn navigation level.

KEY FEATURES

The data is stored consistently on different levels throughout the database. Country, province, urban area boundaries, and major lakes and rivers are included worldwide for geographic reference.

TYPICAL USE CASES

AND Road Network is used for navigation maps, digital maps, geocoding, hazardous material routes, ferries and rails and powerlines.
