

Road Network

A large graphic occupying the lower two-thirds of the page. It features a vibrant orange-to-red gradient background. The central focus is a perspective view of a road network, with multiple lines radiating from a central point towards the edges, creating a sense of depth and movement. The lines are slightly blurred, giving it a dynamic, high-speed feel.

AND offers proprietary digital maps. AND has more than 30 years of experience in digital map making and has digitized over 34 million kilometers of road with a broad range of attributes, approximately 1 million polygons and many millions of POI's. The proprietary database of AND contains a worldwide coverage of Digital Maps on various levels, from a scale of 1:250,000 to 1:2,000,000. North America and all Western European countries are available on turn-by-turn navigation level.

KEY FEATURES

The data is stored consistently on different levels throughout the database. Country, province, urban area boundaries, and major lakes and rivers are included worldwide for geographic reference.

TYPICAL USE CASES

The AND road network is typically used for fleet management, route calculation, navigation, and commute expense calculation.
